

The Internet has changed the way we search for and find information. By typing a search phrase in an Internet search application such as Google, you can instantly view answers to your questions.

Why is enterprise data not as easily accessed? In most enterprises, users are forced to search multiple applications and within each application multiple menu options, tasks and reports to find a specific answer.

z.Find for Sage Accpac ERP is changing the industry. Now, all of your enterprise data is as easy as search, find. z.Find is a stand-alone application that easily finds relevant information from multiple enterprise applications in a user-friendly, easily maintained environment.

## Enterprise Application Search

Traditional ERP requires knowledge of data location and multiple steps to navigate the system to locate the data. Providing turn-key plug-ins for various Sage Accpac applications, including compatibility for customized enhancements and third party applications, z.Find is the central search tool for your entire enterprise.

- Scalability and flexibility allows for company growth
- Application can integrate with the entire enterprise
- Low cost to set up and maintain

## Ease of Use

z.Find is an operational search with a user-centric approach to working with enterprise-focused content systems. This Smart Find™ method brings relevant search results to you instantly without navigating your enterprise system. With an “all data, one place” approach, users can utilize a single point of entry to search multiple databases, companies, sources and applications. Then, easily launch multiple applications directly from a search result with z.Find.

- Increase staff and operations efficiency
- Enable all employees, even the occasional user to find data
- Think Enterprise 2.0 and advance your enterprise to the next level

## Secure Search

z.Find is an enterprise search tool that fully utilizes application security. User, group and role-based security levels can be defined for search results. Data encryption adds to the security of this search application tool.

## Easy to Administer

Simply install, crawl and go. It's easy to optimize performance with built in CPU throttling and light architecture. z.Find offers easy crawling for custom enhancements and third party applications. You can even create your own search parameters to crawl any of the most popular databases: Oracle, Microsoft SQL and ODBC-compliant databases.

- Fast, easy implementation
- Begin getting ROI fast
- Little IT support required (limited cost and IT resources)

## ROI Statement

z.Find is easy to use and fast to implement. Simply install and you will be up and running faster than ever before with Rapid (merger) of acquired company data. Improved efficiency of data acquisition, decreased training on ERP and other enterprise systems and an increase in productivity will show an immediate, measurable ROI.

## z.Cloud Interface

Now, you can search your data from virtually anywhere using z.Cloud. Employees can stay connected and find information using multiple devices. Increase your flexibility and mobility all while minimizing physical infrastructure and maintenance with z.Cloud web-based access.
