FOR IMMEDIATE RELEASE

EVS Celebrates Its 10th Anniversary as an ERP Software Innovator

Boulder, CO – March 21, 2012 – Escape Velocity Systems (EVS), a Boulder, Colorado based enterprise resource planning (ERP) software innovation group is proud to announce today it is celebrating its 10th year of providing ERP software solutions.

“Over the years, EVS has never lost sight of what made us successful; laser focus on providing excellence and innovation to process manufacturing and distribution companies. Everything we do, from R&D to delivery of our products and services is born from that guiding principle,” states Evan Garber, President of EVS

During the past 10 years, EVS has partnered with Sage North America to bring new ERP software products and services to the mid-market ERP space. In the drive to create tools to enhance ERP, EVS has developed products such as the O2 Process Manufacturing Suite and O2 Mobile Warehouse.

O2 Process Manufacturing is part of an ERP software system developed for Sage 500 ERP. It combines Sage 500 ERP’s financial accounting with process manufacturing software features, such as: formula costing, production, quality control, regulatory compliance reporting and security into a single, integrated system. The process manufacturing industries served by O2 Process Manufacturing software include food and beverage manufacturing, commercial bakeries, chemical manufacturing, cosmetics and nutraceutical manufacturing, pharmaceutical and life sciences manufacturing and metal milling.

O2 Mobile Warehouse is an inventory management software and warehouse distribution system developed specifically for Sage 500 ERP. It provides real-time views of inventory and allows users to fully utilize the Sage 500 warehouse management module.

Recently, EVS launched z.Find enterprise application search, a tool that is changing the ERP software industry by allowing users to search and find information within their system in a matter of seconds. Through new ERP software innovations, EVS has grown to become a leading developer in the industry.

HAPPY BIRTHDAY EVS!
